

The only insignificant thing about this home is the carbon footprint.

ThermaWallPlus®

Frasers Landing utilises RMAX's innovative new ThermaWallPlus® exterior wall paneling system, exclusively. The finish of this Australian made EPS based product looks and feels similar to rendered masonry but offers a wide range of benefits compared to traditional building materials and methods. These include greater architectural flexibility, increased thermal insulation properties, reduced material and installation costs and reduced transport and site costs.

In addition, the minimised energy usage in the manufacturing process, recyclability and outstanding insulation qualities of ThermaWallPlus® leave a significantly smaller footprint on our planet.

For more information and specifications of ThermaWallPlus®, please contact RMAX's exclusive distributor:
