**ARCHITECTURAL MOULDINGS**  
**IN A MODERN ERA**

Custom profiling is made possible with our computer-controlled precision-cutting equipment.

## Innovative Use Of Materials

Build Technologies with more than 15 years experience in the architectural moulding industry, has developed this new concept of the traditional architectural moulding into today's modern styles, easy-to-implement and cost-effective product.

We design and cut EPS (expanded polystyrene foam) to shape, then spray-coat it with layers of weather-resistant, high impact polyurethane. The result is a very lightweight and extremely durable building material.

Unique custom profiling is made possible with our computer-controlled precision-cutting equipment. We are capable of producing an endless variety of moulding profiles to suit any architectural features required. We encourage builders and designers to work with us on projects using our expertise to custom design what's required to transform a new building or if renovating old buildings, this service is the same cost as using standard products due to our manufacturing process.

A wide variety of architectural profiles and textured finishes are available.

## Practicable & Flexible

Build Technologies is able to deliver on the design and production of custom products in just a few days if required, although in general, lead times of 2 weeks from date of order are preferred. We then schedule the installation by our own staff, or we can supply direct to the DIY handy man!

Servicing is as important to us as time on site is to you with regard to scheduling elements like trades people or scaffolding. Our staff is dedicated to coordinating the production and onsite scheduling to ensure things run smoothly and on time. It's possible to make significant savings in the construction times required due to the efficiency of the manufacturing and installation systems we have developed.

Build Technologies' new products give architects and builders a new level of freedom when it comes to the design and construction of stylish homes and commercial properties.

Significant savings in construction time are possible with Build Technologies' efficient installation systems.

## Stylish and Elegant Detailing Made Simple

A wide variety of textured finishes are possible including trowel finish paints on flat mouldings and textured paint brush finishes on profiled moulds giving a modern rendered look to match in with wall finishes.

To see examples of the product used in a variety of buildings, to view samples of our wide range of profiles, or to discover how our architectural mouldings can be custom-designed to suit the unique requirements of your construction project, contact Build Technologies.
